The certificate Europe/Austria Bonus&Safety 3 is based on two reknown stock indices. The European benchmark index **EURO STOXX 50®** and the Austrian benchmark index **ATX®** serve as underlyings for this certificate. This investment product is suited for investors who expect these two indices to perform stably in the upcoming five years and who deem price slumps of 51% or more unlikely to occur. The certificate offers investors the opportunity to obtain an attractive bonus yield of 20% (equals 3.71% p.a.) while offering partial protection for the invested capital. The initial distance to the barrier (safety buffer) is 51%. The certificate has a term of five years. Further details regarding opportunities and risks of this certificate are presented on the following page.

### FUNCTIONALITY

At the initial valuation date, the closing price of the EURO STOXX 50® index and the closing price of the ATX® index are fixed as **starting values** and the respective **barriers** (49% of the respective starting value) are determined. During the observation period the prices of both the EURO STOXX 50® index and the ATX® index are continuously compared with the respective barrier. If the bonus amount is paid out at the end of the term depends on the performance of the two underlying indices. At the final valuation date one of the following scenarios will apply:

#### SCENARIO 1: both indices always quoted ABOVE the barrier

If both the EURO STOXX 50® index **AND** the ATX® index always quoted above the barrier of 49% of their respective starting value during the observation period, the certificate is **redeemed at 120%** of the nominal value. This means, provided that none of the two indices ever declines by 51% or more compared to its starting value, investors obtain EUR 1,200 per nominal value at the maturity date. Due to the cap, this amount represents the maximum payout.

#### SCENARIO 2: barrier TOUCHED or UNDERCUT by at least one index

If the EURO STOXX 50® index **AND/OR** the ATX® index touched or undercut the barrier of 49% of the respective starting value during the observation period, redemption at the maturity date is effected according to the performance of the index that performed worst (percentage change from the starting value to the closing price at the final valuation date). Even if the barrier has been touched or undercut, the maximum payout remains limited at EUR 1,200 per nominal value and investors do not participate in price increases of the underlyings beyond the bonus level/cap.

Structured securities are risky instruments of wealth investment. Should the price of the respective underlying instrument of a certificate develop adversely, an investor may lose part or all of his or her invested capital. Structured securities react more strongly or weakly to changes of the price of the underlying instrument depending on a number of factors (e.g. volatility or correlation of the underlying instruments, interest, dividends, remaining term, changes in foreign exchange rates) and do not move simultaneously with the underlying.

Issuer Risk/Creditor Participation ("bail-in"): Redemption or repayment of the certificate at the end of the term is dependent on the solvency of the issuer (issuer risk). Investors are exposed to the risk that Raiffeisen Centrobank AG as an issuer might be unable to fulfil its obligations in respect of the described financial instruments, such as in the event of insolvency (inability to pay/over-indebtedness) or a legal order to initiate resolution measures. The resolution authority may also issue such an order before any insolvency proceedings if the issuer is judged to be in crisis. Under these circumstances the resolution authority has wide-ranging powers to take action (so-called "bail-in instruments"). For example, it can reduce the claims of investors in respect of the described financial instruments to zero, terminate the described financial instruments, or convert them into shares of the issuer and suspend investors' rights. More detailed information is available at [www.rcb.at/en/basag](http://www.rcb.at/en/basag). Under certain circumstances, the issuer has the right to redeem the certificate prior to the maturity date. A total loss of the capital invested is possible.
